

Business Sales Performance Analytics

Objective:

The objective of this project is to analyze business sales data and identify revenue trends, top-performing products, profitable categories, and regional sales performance.

Dataset:

The Superstore Sales Dataset was used for this analysis. It contains order details, sales, profit, quantity, category, product, region, and date information.

Tool Used:

Power BI Desktop

Dashboard KPIs:

Total Sales: 2.30M

Total Profit: 286.40K

Total Quantity: 38K

Key Insights:

1. Technology generated the highest sales among the categories.
2. The West region recorded the highest sales performance.
3. Copiers and Phones were among the most profitable sub-categories.
4. Sales showed an increasing trend from 2014 to 2017.
5. A few top products contributed significantly to overall sales.

Recommendations:

1. Focus more on high-performing categories such as Technology.
2. Increase marketing and sales efforts in strong regions like West and East.
3. Promote profitable sub-categories such as Copiers and Phones.
4. Improve performance in lower-sales regions through targeted campaigns.
5. Monitor sales trends regularly to plan inventory and business strategies.

Conclusion:

This dashboard helps understand sales performance, profitability, regional performance, and product-level insights. It can support better business decisions and growth planning.
